### **Kid Orange Tech Provides Interactive Classroom Technology At Kids R Kids Learning Academy of Cypress**

*May 8, 2013* (Boca Raton, FL) – Kid Orange Tech, premier provider of educational technology solutions for 21<sup>st</sup> century kids, announced today that it has installed interactive classroom technology, powered by ABCmouse.com, at Kids R Kids Learning Academy of Cypress.

Susanne and Larry Turek, owners of Kids R Kids Learning Academy of Cypress, made the decision to install Kid Orange Tech interactive classroom technology because it provides an unprecedented method for engaging parents in their children's education on a daily basis. Touchscreen interactive learning centers deliver ABCmouse.com's 3500+ learning activities for use in Kids R Kids Childcare Services classrooms, and classroom-linked home accounts enable parents to guide their children through the same activities at home via an array of hardware options, including tablet computers and other mobile devices.

"We strive to stay ahead of trends with all teaching methods in our school," said Susanne Turek. "The Kid Orange Tech/ABCMouse.com solution allows us to provide standards-based educational tools for home use, delivered on devices our families already use, such as smart phones and tablet computers. The responsible use of technology to deliver fun and compelling learning activities gives our school a unique competitive edge."

"We are thrilled to welcome Kids R Kids Learning Academy of Cypress to the growing list of top tier preschools that have adopted our interactive classroom technology to support the curriculum already established in their school," said Peter Smith, Kid Orange Tech's President. "By adopting our solution they have recognized the substantial value Kid Orange and ABCmouse.com provide by linking classrooms to living rooms through the technology that is pervasive in American society."

#### ***About Kid Orange Tech***

Kid Orange Tech provides educational solutions for 21st century kids by supporting educators and parents in implementing technology responsibly into children's lives. We believe technology has the ability to enrich a child's life when used as an additional learning tool and is not intended to replace traditional play or an existing school curriculum. The most powerful use of technology for children is when it is used to connect educators and parents to easily communicate learning goals so that a parent can reinforce what is being taught in school.

#### ***About Kids R Kids Learning Academy of Cypress***

Kids R Kids Learning Academy of Cypress is Texas's premier extended day preschool and afterschool program. The school has received accreditations from AdvancEd / SACS. Kids R Kids is committed to Kindergarten readiness through the use of an accredited curriculum, classroom technology, and enrichment programs such as Spanish, Music and other extra-curriculum activities. Kids R Kids also has classroom Internet cameras that allow parents and grandparents to view their child's classroom securely via the Internet and smartphones.
